Final Problem Statement

Customers and drivers require a secure, reliable, and efficient platform to book rides, manage bookings, track vehicles in real time, and process digital payments. However, traditional cab booking methods often involve delayed bookings, lack of fare transparency, limited ride tracking, and inefficient management. These challenges lead to inconvenience, increased waiting time, and poor user experience. The proposed Cab Booking System addresses these issues by providing online booking, real-time driver tracking, secure authentication, digital payment integration, and an administrator dashboard for efficient system management.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer who needs transportation	Book a cab quickly using my mobile or laptop	Finding an available cab takes time	There is no centralized system to match users with nearby drivers instantly	Frustrated and delayed
PS-2	A customer	Know the estimated fare before booking and track my booked cab in real time	Fare prices are often unclear and	Traditional booking methods do not provide fare estimation	Uncertain about travel costs and Anxious and impatient
